

Introduction to HPC Using zcluster at GACRC

Georgia Advanced Computing Resource Center

University of Georgia

Zhuofei Hou, HPC Trainer

zhuofei@uga.edu

Outline

- What is GACRC?
- What is HPC Concept?
- What is zcluster?
- How does zcluster operate?
- How to work with zcluster?

What is GACRC?

Who Are We?

- Georgia **A**dvanced **C**omputing **R**esource **C**enter
- Collaboration between the Office of Vice President for Research (**OVPR**) and the Office of the Vice President for Information Technology (**OVPIIT**)
- Guided by a faculty advisory committee (GACRC-AC)

Why Are We Here?

- To provide computing hardware and network infrastructure in support of high-performance computing (**HPC**) at UGA

Where Are We?

- <http://gacrc.uga.edu> (Web) <http://wiki.gacrc.uga.edu> (Wiki)
- <http://gacrc.uga.edu/help/> (Web Help)
- https://wiki.gacrc.uga.edu/wiki/Getting_Help (Wiki Help)

GACRC Users September 2015

Colleges & Schools	Depts	PIs	Users
Franklin College of Arts and Sciences	14	117	661
College of Agricultural & Environmental Sciences	9	29	128
College of Engineering	1	12	33
School of Forestry & Natural Resources	1	12	31
College of Veterinary Medicine	4	12	29
College of Public Health	2	8	28
College of Education	2	5	20
Terry College of Business	3	5	10
School of Ecology	1	8	22
School of Public and International Affairs	1	3	3
College of Pharmacy	2	3	5
	40	214	970
Centers & Institutes	9	19	59
TOTALS:	49	233	1029

GACRC Users September 2015

Centers & Institutes	PIs	Users
Center for Applied Isotope Study	1	1
Center for Computational Quantum Chemistry	3	10
Complex Carbohydrate Research Center	6	28
Georgia Genomics Facility	1	5
Institute of Bioinformatics	1	1
Savannah River Ecology Laboratory	3	9
Skidaway Institute of Oceanography	2	2
Center for Family Research	1	1
Carl Vinson Institute of Government	1	2
	19	59

Concept of High Performance Computing (HPC)

- ✓ **Serial** problem can not be broken
- ✓ *Discrete* instructions executed *sequentially*
- ✓ Only *1* instruction executed at any moment on a *single* processor

- ✓ Problem broken into *parallel* parts can be solved *concurrently*
- ✓ Instructions executed *simultaneously* on *multiply* processors
- ✓ Synchronization/communication employed
- ✓ **Shared-memory multithreaded job** or **MPI job** (Message Passing Interface)

What is zcluster?

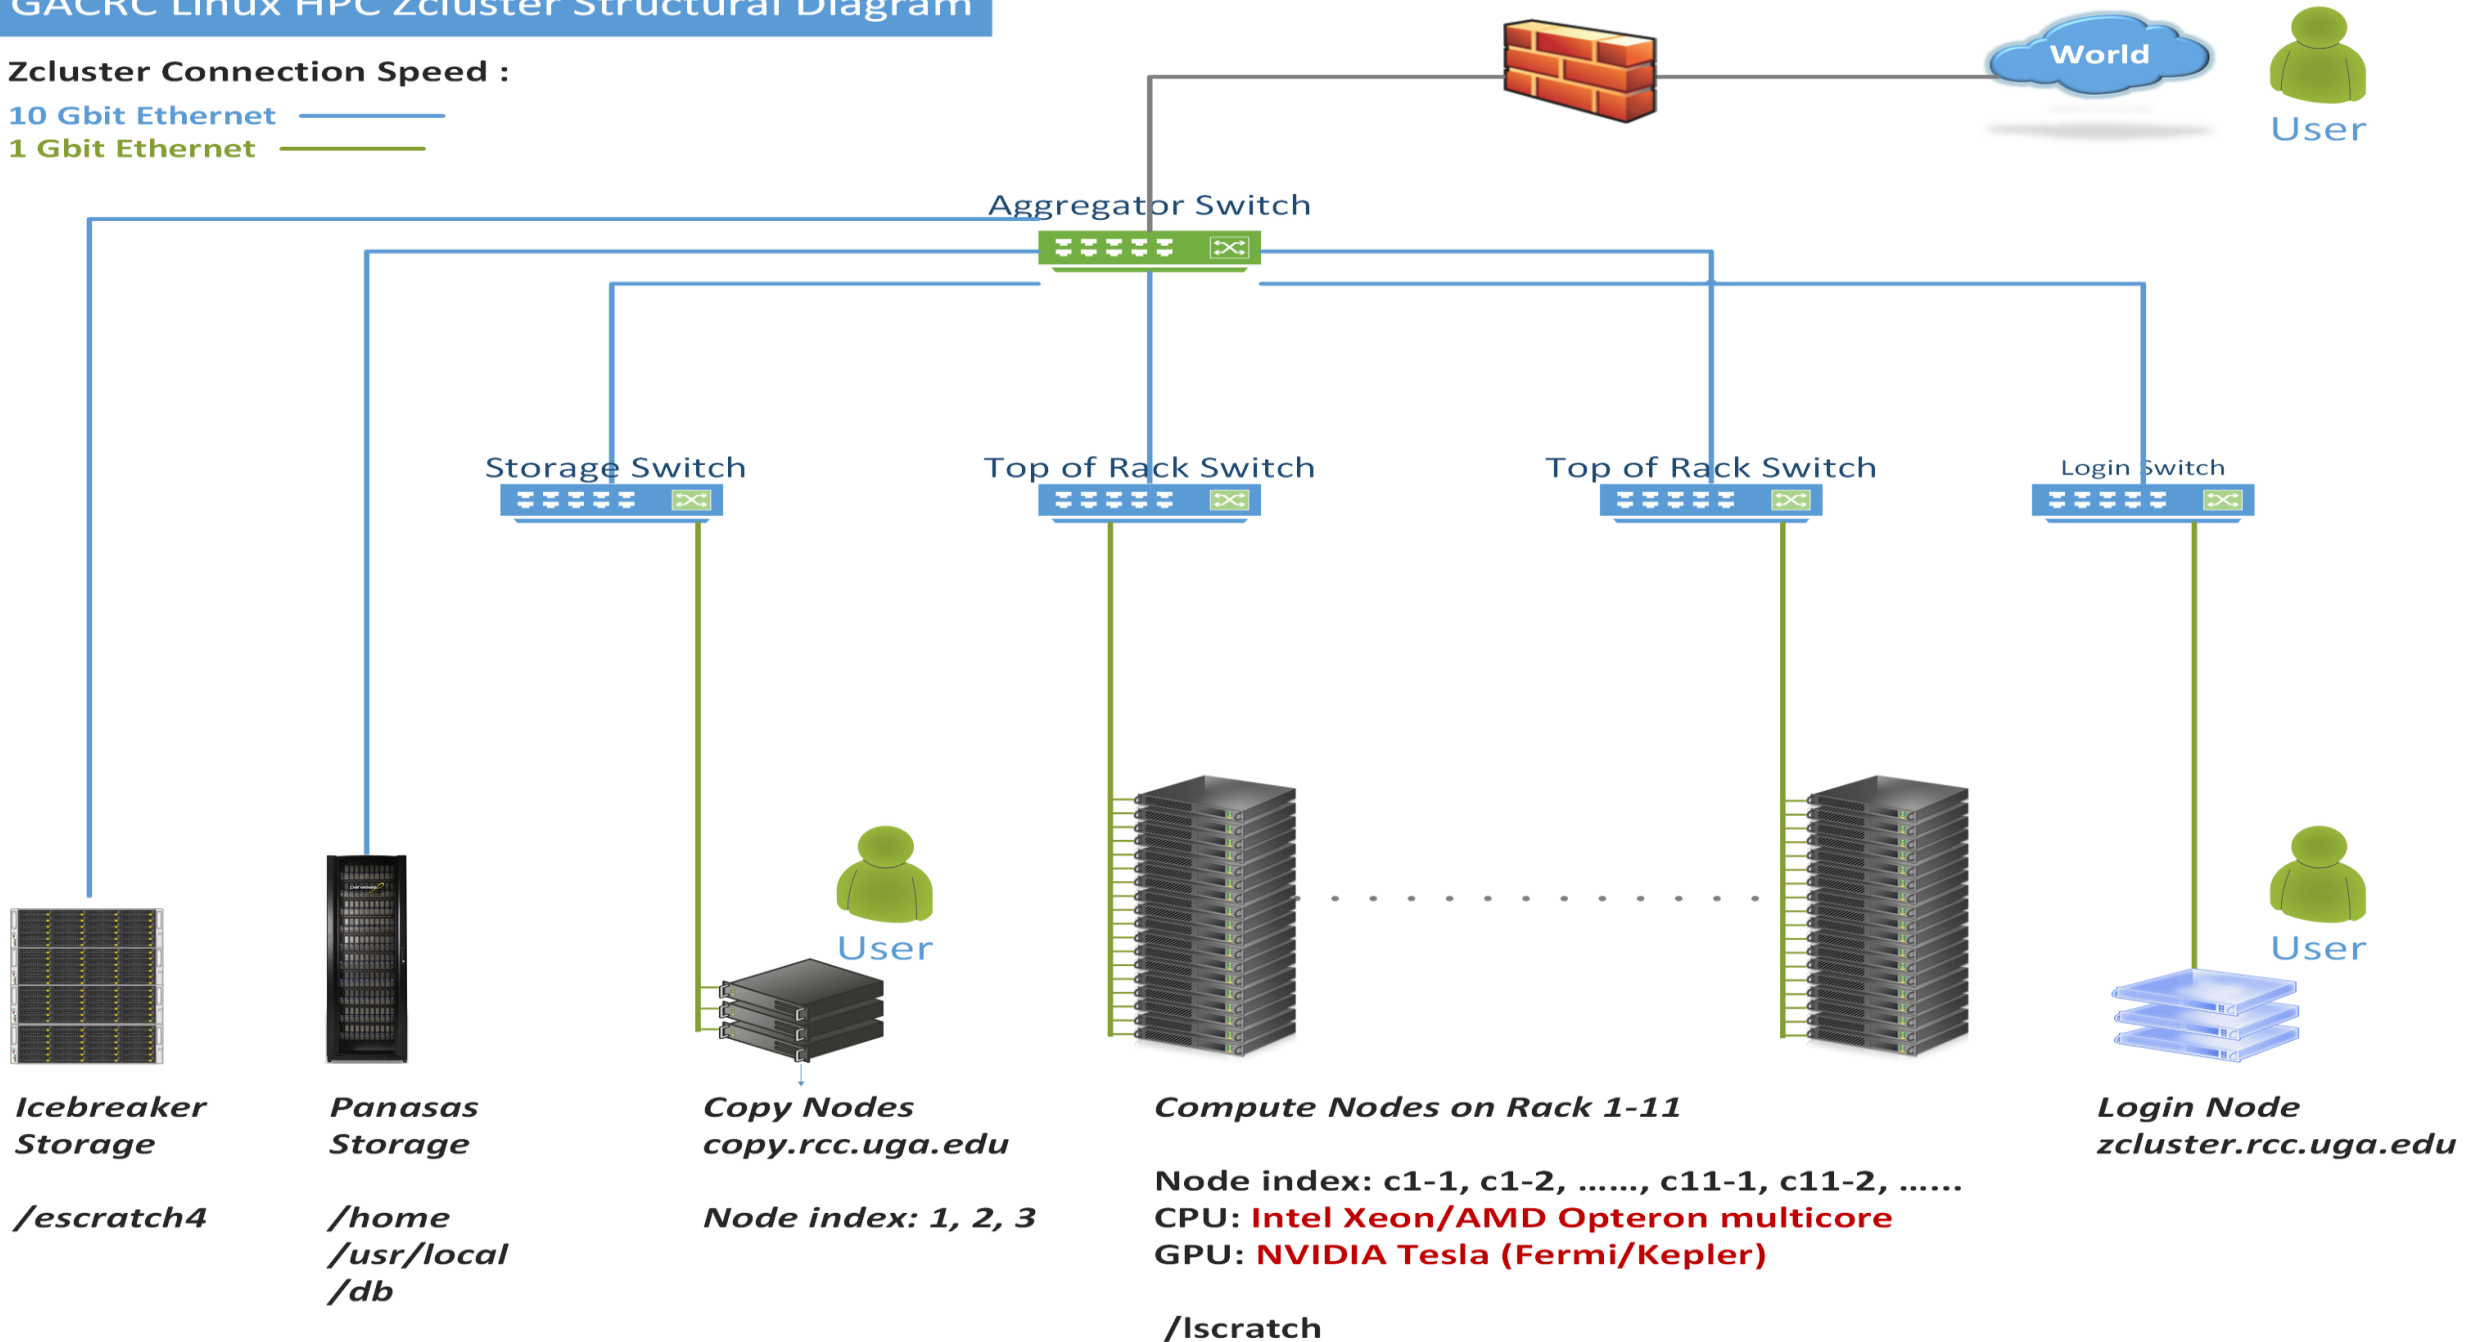

- Cluster Structural Diagram
- General Information
- Computing Resources
- Storage Environment

GACRC Linux HPC Zcluster Structural Diagram

Zcluster Connection Speed :

10 Gbit Ethernet 

1 Gbit Ethernet 

What is zcluster – General Information

GACRC zcluster is a Linux high performance computing (HPC) cluster:

- Operating System: **64-bit Red Hat Enterprise Linux 5 (RHEL 5)**
- Login Node: **zcluster.rcc.uga.edu**  Interactive Node: **compute-14-7/9**
Copy Node: **copy.rcc.uga.edu**
qlogin
- Internodal Communication: **1Gbit** network
compute nodes  compute nodes
compute nodes  storage systems

What is zcluster – General Information

- Batch-queueing System:
 - Jobs can be started (submitted), monitored, and controlled
 - Determine which compute node is the best place to run a job
 - Determine appropriate execution priority for a job to run

- On zcluster: **Sun Grid Engine (SGE)**

What is zcluster – Computing Resources

Queue Type	Queue Name	Nodes	Processor	Cores/Node	RAM(GB)/Node	Cores	NVIDIA GPU
Regular	rcc-30d	45	Intel Xeon	12	48	540	N/A
		150		8	16	1200	
High Memory	rcc-m128-30d	4	Intel Xeon	8	192	32	N/A
		10		12	256	120	
	rcc-m512-30d	2		32	512	64	
Multi Core	rcc-mc-30d	6	AMD Opteron	32	64	192	N/A
Interactive	interq	2	AMD Opteron	48	132	96	N/A
GPU	rcc-sgpu-30d	2	Intel Xeon	8	48	16	4 Tesla S1070 cards
	rcc-mgpu-30d	2		12	48	24	9 Tesla (Fermi) M2070 cards
	rcc-kgpu-30d	4		12	96	24	32 Tesla (Kepler) K20Xm cards

Total peak performance: 23 Tflops

Layer 1: Node

- A standalone “computer in a box”
- Multiple processors, e.g. 2, sharing memory
- Local disk storage, network interface, etc.
- Networked into a cluster

Layer 2: Processor

- A single computing component
- Multicore processor, e.g. 4 cores

Layer 3: Core

- Central processing unit (CPU) reading and executing instructions independently
- Each core is assigned to a software thread

What is zcluster – Storage Environment

- **Home directory** → */home/groupname/username*
 - Mounted and visible on **all nodes**, with a quota of **~100GB**
 - Any directory on /home has **snapshot** backups
 - Taken once a day, and maintained **4 daily** ones and **1 weekly** one
 - Name: **.snapshot**, e.g., /home/abclab/jsmith/.snapshot
 - **Completely invisible**, however, user can “cd” into it and then “ls”:

```

zhuofei@zcluster:~$ ls -a
.          .bash_profile  .emacs.d      .fontconfig   .maple_history  MPIs      scripts  test.sh
..         .bashrc        .ENV_file     .gnuplot_history .Mathematica    openMPs   serials  .viminfo
.bash_history  downloads     exe           .history       .mc              .profile  sht      .Xauthority
.bash_logout  .emacs       .flexlmrc    .lessht       .mozilla         Pthreads  .ssh     ← .snapshot is NOT
zhuofei@zcluster:~$ cd .snapshot ← can “cd” into .snapshot      shown here!
zhuofei@zcluster:~/ .snapshot$ ls ← then “ls” to list its contents
2015.06.21.00.00.01.weekly  2015.06.27.01.00.01.daily  2015.06.28.01.00.01.daily  2015.06.30.01.00.01.daily
2015.06.26.01.00.01.daily  2015.06.28.00.00.01.weekly  2015.06.29.01.00.01.daily
  
```

What is zcluster – Storage Environment

- **Local scratch** → `/lscratch/username`
 - On **local disk** of each **compute** node → **node-local storage**
 - rcc-30d 8-core nodes: **~18GB**, rcc-30d 12-core nodes: **~370GB**
 - **No snapshot backup**
 - Usage Suggestion: *If your job writes results to /lscratch, job submission script should move the data to your home or escratch before exit*
- **Ephemeral Scratch** → `/scratch4/zhuofei_Jun_22`
 - Create with `make_escalch` command
 - Visible to **all nodes** with a quota of **4TB**
 - **No snapshot backup**
 - To be deleted after **37 days**

What is zcluster – Storage Environment

Filesystem	Role	Quota	Accessible from	Intended Use	Notes
/home/abclab/username	Home	100GB	zcluster.rcc.uga.edu (Login)	Highly static data being used frequently	Snapshots
/escratch4/username	Scratch	4TB	copy.rcc.uga.edu (Copy) Interactive nodes (Interactive) compute nodes (Compute)	Temporarily storing large data being used by jobs	Auto-deleted in 37 days
/lscratch/username	Local Scratch	18 ~ 370GB	Individual compute node	Jobs with heavy disk I/O	User to clean up
/project/abclab	Storage	Variable	copy.rcc.uga.edu (Copy)	Long-term data storage	Group sharing possible

- Note:
1. /usr/local : Software installation directory
/db : bioinformatics database installation directory
 2. To login to **Interactive** nodes, use **qlogin** from **Login** node

What is zcluster – Storage Environment

6 Main Function	On/From-Node	Related Filesystem
Login Landing	Login or Copy	/home/abclab/username (Home) (Always!)
Batch Job Submitting	Login or Interactive	/escratch4/username (Scratch) (Suggested!) /home/abclab/username (Home)
Interactive Job Running	Interactive	/escratch4/username (Scratch) /home/abclab/username (Home)
Data Archiving , Compressing and Transferring	Copy or Transfer	/escratch4/username (Scratch) /home/abclab/username (Home)
Job Data Temporarily Storing	Compute	/lscratch/username (Local Scratch) /escratch4/username (Scratch)
Long-term Data Storing	Copy or Transfer	/project/abclab

How does zcluster operate?

Next Page

How to work with zcluster?

Before we start:

- To get zcluster to be your best HPC buddy, go to
GACRC Wiki (<http://wiki.gacrc.uga.edu>)
GACRC Web (<http://gacrc.uga.edu>)
- To get the most effective and qualified support from us, go to
GACRC Support (https://wiki.gacrc.uga.edu/wiki/Getting_Help)
- To work happily and productively, follow the cluster's
Community Code of Conduct (**CCOC**)

How to work with it?

- Cluster's CCOC:

On cluster, you are not alone..... Each user is sharing finite resources, e.g., CPU cycles, RAM, disk storage, network bandwidth, with other researchers.

What you do may affect other researchers on the cluster.

6 rules of thumb to remember:

- NO jobs running on login node
- NO multi-threaded job running with only 1 core requested
- NO large memory job running on regular nodes
- NO long job running on interactive node
- NO small memory job running on large memory nodes
- Use the copy node for file transfer and compression

How to work with zcluster?

- Start with zcluster
- Connect & Login
- Transfer Files
- Softwares Installed
- Run Interactive Jobs
- Submit Batch Jobs
 - How to submit *serial*, *threaded*, and *MPI* batch jobs
 - How to check job status, cancel a job, etc.

How to work with zcluster – Start with zcluster

- You need a **User Account** : username@zcluster.rcc.uga.edu
- Procedure: https://wiki.gacrc.uga.edu/wiki/User_Accounts
- A UGA faculty member (**PI**) may register a computing lab:
<http://help.gacrc.uga.edu/labAcct.php>
- The PI of a computing lab may request user accounts for members of his/her computing lab: <http://help.gacrc.uga.edu/userAcct.php>
- User receives an email notification once the account is ready
- User can use `passwd` command to change initial temporary password

How to work with zcluster – Connect & Login

- Open a connection: Open a terminal and `ssh` to your account

```
ssh zhuofei@zcluster.rcc.uga.edu
```

or

```
ssh -X zhuofei@zcluster.rcc.uga.edu
```

⁽¹⁾ `-X` is for X windows application running on the cluster to be forwarded to your local machine

⁽²⁾ If using Windows, use `SSH client` to open connection, get from UGA download software page)

- Logging in: You will be prompted for your `zcluster password`

```
zhuofei@zcluster.rcc.uga.edu's password: █
```

⁽³⁾ On Linux/Mac, when you type in the password, the prompt blinks and does not move)

- Logging out: `exit` to leave the system

```
zhuofei@zcluster:~$ exit
```

How to work with zcluster – Transfer Files

- On Linux, Mac or cygwin on Windows : `scp [Source] [Target]`

E.g. 1: On local machine, do Local → zcluster

```
scp file1 username@copy.rcc.uga.edu:~/subdir
```

```
scp *.dat username@copy.rcc.uga.edu:~/subdir
```

E.g. 2: On local machine, do zcluster → Local

```
scp username@copy.rcc.uga.edu:~/subdir/file ./
```

```
scp username@copy.rcc.uga.edu:~/subdir/*.dat ./
```

- On Window: **FileZilla**, **WinSCP**, etc.

How to work with zcluster – Softwares Installed

- Perl, Python, Java, awk, sed, C/C++ and Fortran compilers
- Matlab, Maple, R
- Many Bioinformatics applications: NCBI Blast+, Velvet, Trinity, TopHat, MrBayes, SoapDeNovo, Samtools, RaxML, etc.
- RCCBatchBlast (RCCBatchBlastPlus) to distribute NCBI Blast (NCBI Blast+) searches to multiple nodes.
- Many Bioinformatics Databases: NCBI Blast, Pfam, uniprot, etc.
- For a complete list of applications installed:
<https://wiki.gacrc.uga.edu/wiki/Software>

How to work with zcluster – Run Interactive Jobs

- To run an interactive job, you need to open a session on an **interactive node** using **qlogin** command:

```

zhuofei@zcluster:~$ qlogin
Your job 1391816 ("QLOGIN") has been submitted
waiting for interactive job to be scheduled ...
Your interactive job 1391816 has been successfully scheduled.
...
compute-14-7.local$ ← Now I am on compute-14-7, which is an interactive node
  
```

- Current maximum runtime is **12** hours
- When you are done, remember to **exit** the session! 
- Detailed information, like interactive parallel job? Go to: [https://wiki.gacrc.uga.edu/wiki/Running Jobs on zcluster](https://wiki.gacrc.uga.edu/wiki/Running_Jobs_on_zcluster)

How to work with zcluster – Submit Batch Jobs

- Components you need to submit a batch job:
 - **Software** already installed on zcluster
 - **Job submission script** to run the software,
 - ✓ Specifying working directory
 - ✓ Exporting environment variables, e.g.,
 - OMP_NUM_THREADS (OpenMP threads number)
 - LD_LIBRARY_PATH (searching paths for shared libraries)
- Common commands you need:
 - **qsub** with specifying queue name, threads or MPI rank number
 - **qstat, qdel**
 - **qacct, qsj**, etc.

How to work with zcluster – Batch *Serial* Job

- **Step 1:** Create a job submission script *sub.sh* running Samtools:

```
#!/bin/bash           → Linux shell (bash)

cd ${HOME}/testdir   → Specify and enter (cd) the working directory (${HOME}/testdir)

time /usr/local/samtools/latest/samtools <command> [options] → Run samtools with 'time' command to measure amount of time it takes to run the application
```

- **Step 2:** Submit it to the queue:

```
$ qsub -q rcc-30d sub.sh
```

OR

```
$ qsub -q rcc-30d -l mem_total=20g sub.sh
```

to the queue rcc-30d
with **16GB** RAM/Node

to the queue rcc-30d
with **48GB** RAM/Node

How to work with zcluster – Batch *Threaded* Job

- **Step 1:** Create a job submission script *sub.sh* running bowtie2:

```
#!/bin/bash

cd ${HOME}/testdir

/usr/local/bowtie2/latest/bin/bowtie2 -p 4 [options] → Run bowtie2 with 4 threads (-p 4)
```

Number of Threads =
Number of Cores Requested

- **Step 2:** Submit it to the queue:

```
$ qsub -q rcc-30d -l mem_total=20g -pe thread 4 sub.sh
```

Note:
Please use the *rcc-mc-30d* queue,
If using threads *more than 8!*

How to work with zcluster – Batch *MPI* Job

- **Step 1:** Create a job submission script *sub.sh* running RAxML:

```
#!/bin/bash
cd ${HOME}/testdir
```

```
export MPIRUN=/usr/local/mpich2/1.4.1p1/gcc 4.5.3/bin/mpirun
```

→ Define and export environment variable (**MPIRUN**) for convenient usage

```
$MPIRUN -np $NSLOTS /usr/local/raxml/latest/raxmlHPC-MPI-SSE3 [options]
```

→ Run **RAxML** with 20 MPI processes (**-np \$NSLOTS**)

- **Step 2:** Submit it to the queue:

```
$ qsub -q rcc-30d -pe mpi 20 sub.sh
```

20 cores requested,
\$NSLOTS will be assigned to **20** automatically, before
the job submission script is interpreted

How to work with zcluster – Check and Cancel Jobs

- To check the status of all queued and running jobs: **qstat**

```

qstat           → shows your job in the pool
qstat -u "*"    → shows all the jobs in the pool
qstat -j 12345  → shows detailed information, e.g., maxvmem, about the job with JOBID 12345
qstat -g t      → list all nodes used by your jobs
  
```

- To cancel a queued or running job: **qdel**

```

qdel -u zhuofei → deleted all your jobs
qdel 12345      → deletes your job with JOBID 12345
  
```

- To list detailed information about a job: **qsj, qacct**

```

qsj 12345       → shows information, e.g., maxvmem, about the RUNNING job with JOBID 12345
qacct -j 12345  → shows information, e.g., maxvmem, about the ENDED job with JOBID 12345
  
```

Thank You!

A solid blue horizontal bar at the bottom of the slide.
