

Introduction to HPC Using Sapelo Cluster at GACRC

Georgia Advanced Computing Resource Center EITS/University of Georgia

Zhuofei Hou, zhuofei@uga.edu

Outline

- GACRC
- Sapelo Cluster
- Job Submission Workflow
- Work with Sapelo
- Guideline and Practical Tips

GACRC

Who Are We?

- Georgia Advanced Computing Resource Center
- Collaboration between the Office of Vice President for Research (OVPR) and the Office of the Vice President for Information Technology (OVPIT)
- Guided by a faculty advisory committee (GACRC-AC)

Why Are We Here?

➤ To provide computing hardware and network infrastructure in support of high-performance computing (**HPC**) at UGA

Where Are We?

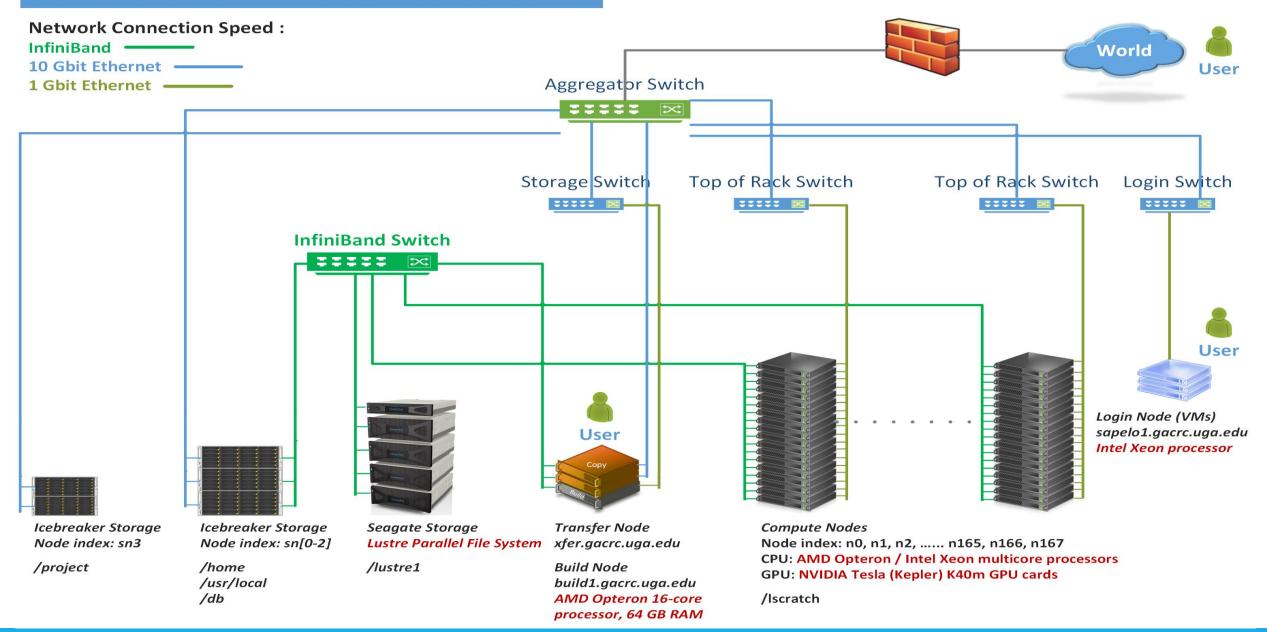

- http://gacrc.uga.edu (Web)
 http://wiki.gacrc.uga.edu (Wiki)
- http://gacrc.uga.edu/help/ (Web Help)
- https://wiki.gacrc.uga.edu/wiki/Getting Help (Wiki Help)

Sapelo Cluster

- Cluster Overview
- Computing Resources
- Storage Environment

The New GACRC Linux HPC Cluster Structural Diagram

Cluster Overview

Sapelo is a Linux high-performance computing (HPC) cluster:

- OS: 64-bit CentOS Linux 6.5
- You can log on to:
 - Login (username@sapelo1.gacrc.uga.edu): edit script, submit batch job
 - Transfer (username@xfer.gacrc.uga.edu): transfer, compress, package data
 - Build (username@build1.gacrc.uga.edu): compile, test
- Login Interactive Node: run interactive job, edit script, submit batch job
- ➤ Internodal Communication: InfiniBand network
 compute nodes ⇔ compute nodes ⇔ storage systems, e.g., /home and /lustre1

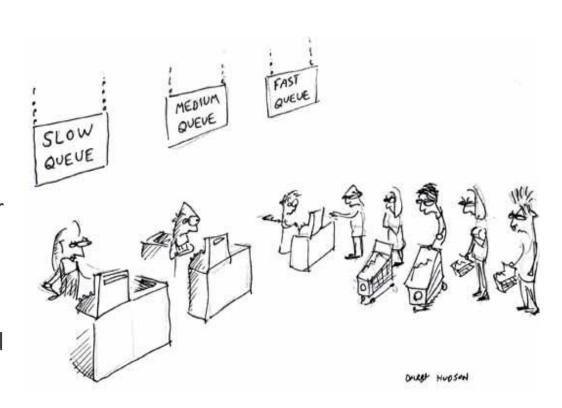

Cluster Overview

Batch-queueing System:

- Jobs can be started (submitted), monitored, and controlled
- Determine which compute node is the best place to run a job
- Determine appropriate execution priority for a job to run

On Sapelo:

- Torque Resource Manager + Moab Workload Manager
- Queueing commands: qsub, qstat, qdel showjobs, showq

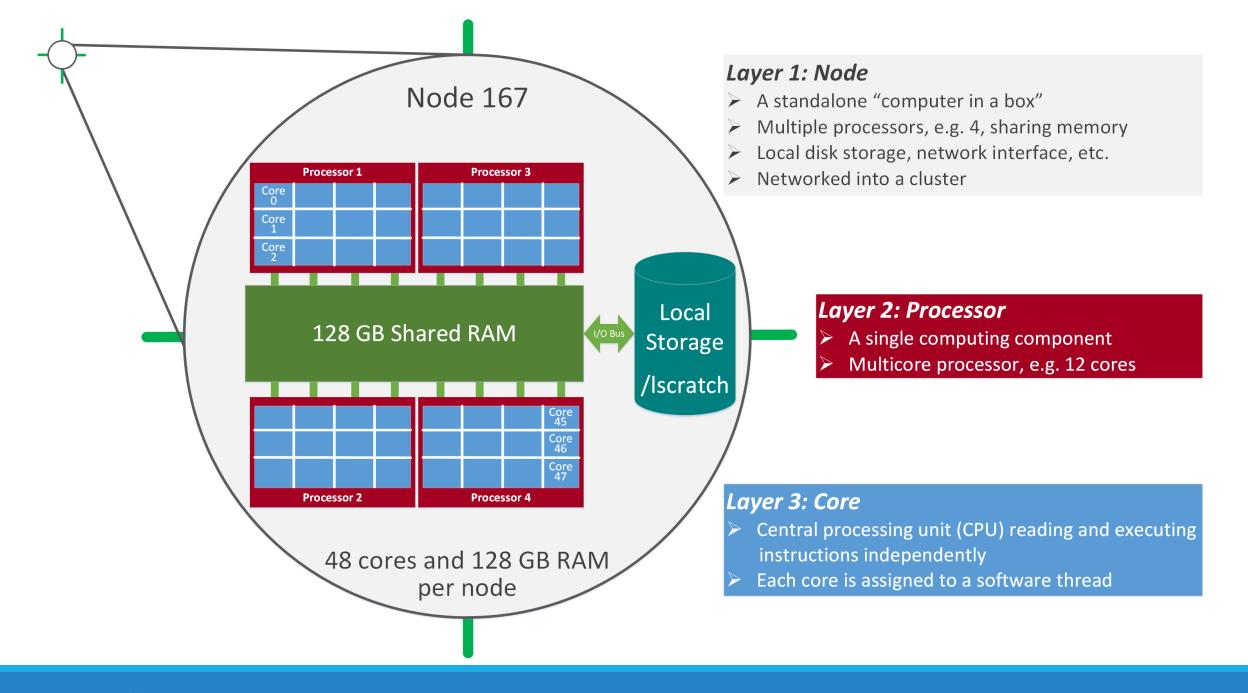

Computing Resources

	Queue	Node Feature	Total	Processor	Cores /Node	RAM (GB) /Node	Max RAM (GB) /Single-node Job	GPU	GPU Cards /Node	InfiniBand
→	batch	AMD	112	AMD Opteron	48	128	126	N/A	N/A	Yes
			4			256	252			
		HIGHMEM	7			512 (6)	504			
						1024 (1)	997			
		GPU	2	Intel Xeon	16	128	126	NVIDIA K40m	8	
		abcnode (buy-in)	2	AMD Opteron	48	256	252	N/A	N/A	

Home: /home/username: 100GB

Global scratch: /lustre1/username: NO quota limit, auto-moved to /project if no modification in 30 days!

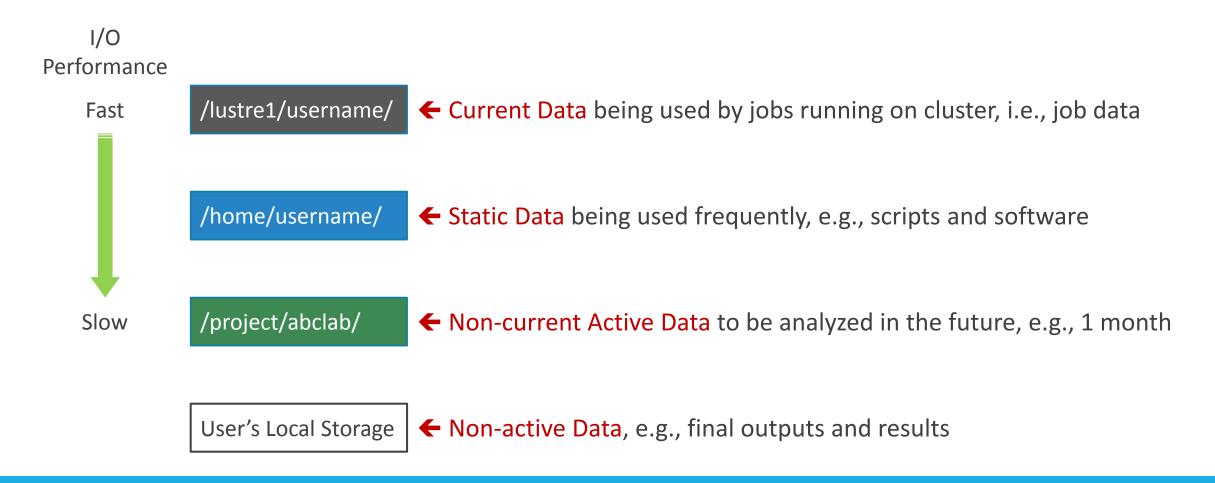

Storage Environment

	4 Filesystems	Role	Quota	Accessible from	Intended Use	Notes
•	/home/username/	Home	100GB	sapelo1.gacrc.uga.edu (Login) Interactive nodes (Interactive) xfer.gacrc.uga.edu (Transfer) build1.gacrc.uga.edu (Build) compute nodes (Compute)	Highly static data being used frequently, e.g., scripts, local software	Snapshots
→	/lustre1/username/	stre1/username/ Scratch No Limit xfer.gacrc.uga.edu (Transfei		Interactive nodes (Interactive) xfer.gacrc.uga.edu (Transfer) compute nodes (Compute)	Temporarily storing large data being used by jobs	Auto-moved to /project if 30 days no modification*
	/lscratch/username/*	Local Scratch	250GB	Individual compute node	Jobs with heavy disk I/O	User to clean up
→	/project/abclab/	Storage	1TB (Initial)	xfer.gacrc.uga.edu (Transfer)	Long-term active data storage	Group sharing possible

Note: /usr/local/apps : Software installation directory ; /db : Bioinformatics database installation directory * denotes component or policy to be implemented in the future

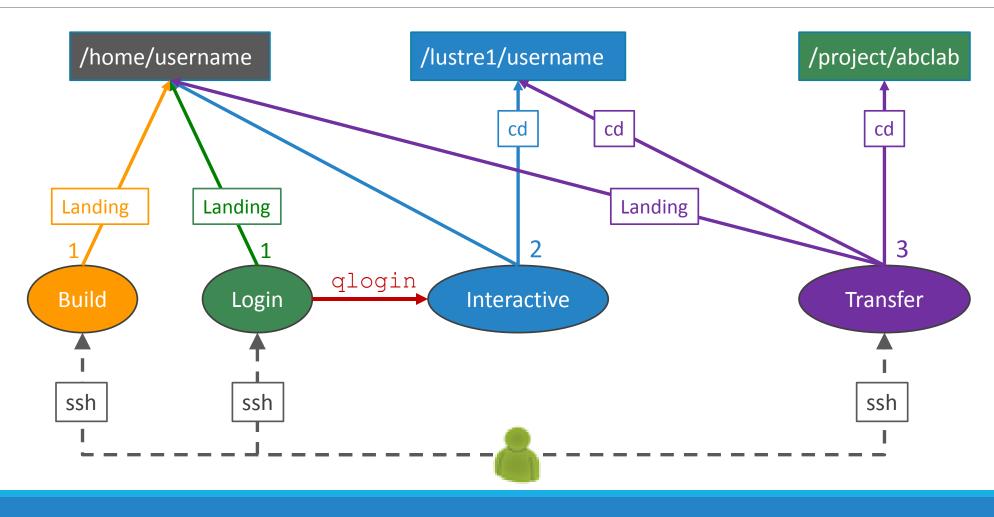

Storage Environment - Data Storing Rule

Storage Environment - Accessing Rule of 123

Storage Environment

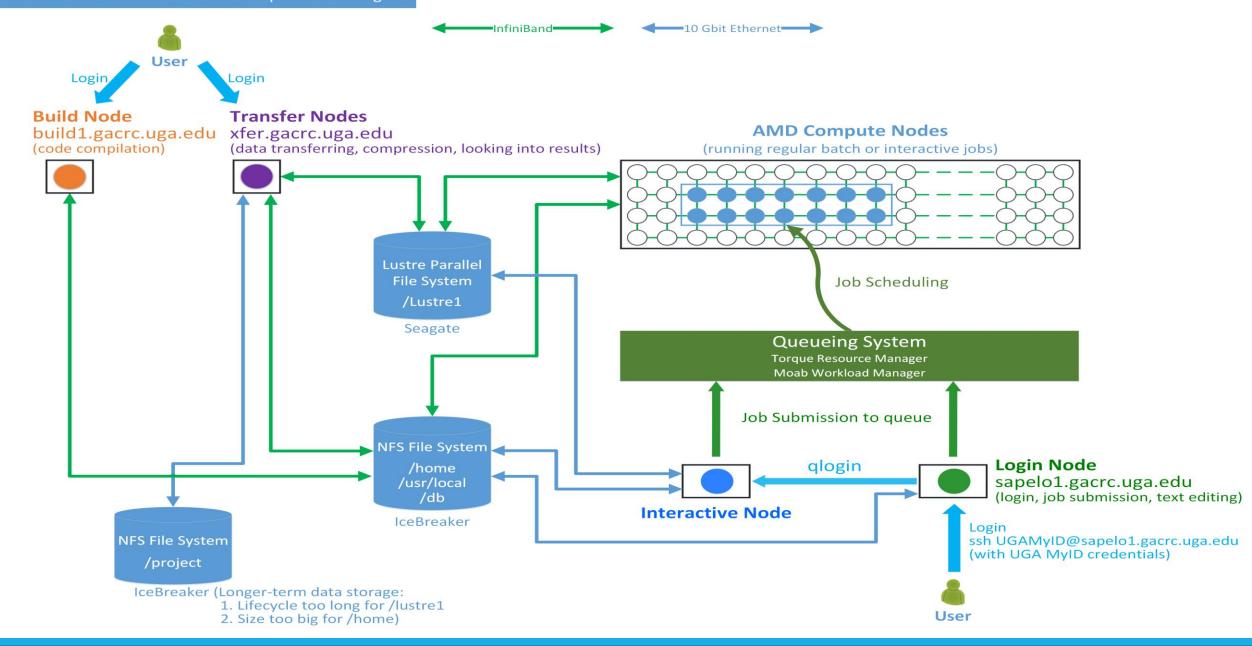

7 Main Functions	On/From-Node	Related Filesystem	
Login Landing	Login or Transfer or Build	/home/username (Home) (Always!)	
	Login	/home/username (Home)	
Batch Job Submitting	Interactive	/lustre1/username (Scratch) (Suggested!) /home/username (Home)	
Interactive Job Running	Interactive	/lustre1/username (Scratch) /home/username (Home)	
Data Transferring, Archiving, Compressing	Transfer	/lustre1/username (Scratch) /home/username (Home)	
Long-term Active Data Storing		/project/abclab	
Code Compilation, Test	Build	/home/username (Home)	
Job Data Temporarily Storing	Compute	/lustre1/username (Scratch) /lscratch/username (Local Scratch)*	

Note: * denotes component or policy to be implemented in the future

Next Page

Job Working Space is Global Scratch: /lustre1/username/

Why?

No quota limit + The I/O fastest filesystem

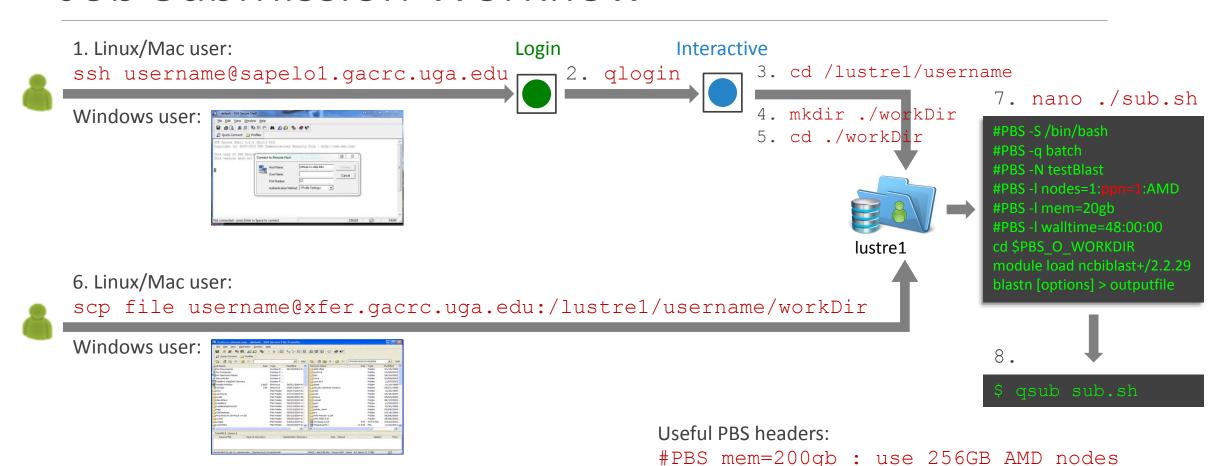

From Interactive Node, cd /lustre1/username/

What need to pay attention?

Clean up! Non-current Active Data → /project/abclab/ ☐ Non-active Data → local storage

Note: -r option of scp command will recursively copy a directory

ppn=24: request 24 cores for 24 threads

- 1. Log on to Sapelo Login node: ssh username@sapelo1.gacrc.uga.edu
- 2. From Sapelo Login node, transfer to Interactive node by issuing the command: qlogin
- 3. From Interactive node: Change directory to global scratch: cd /lustre1/username
- 4. Create a working subdirectory on global scratch: mkdir ./workDir
- 5. Change directory to workDir: cd ./workDir
- 6. Transfer data to workDir using scp or SSH Client File Transfer (with tar or gzip)
- 7. Make a Sapelo job submission script: nano ./sub.sh
- 8. Submit job: qsub ./sub.sh

```
Useful PBS headers: #PBS -1 mem=200gb : use 256GB high-RAM AMD nodes

#PBS -1 nodes=1:ppn=24:AMD : request 24 cores for 24 threads, max 48!
```

Work on Sapelo

Before we start:

GACRC Wiki: http://wiki.gacrc.uga.edu

GACRC Support: https://wiki.gacrc.uga.edu/wiki/Getting Help

Work on Sapelo

To submit a ticket to us?

Job Troubleshooting:

Please tell us details of your question or problem, including but not limited to:

- ✓ Your user name
- ✓ Your job ID
- ✓ Your working directory
- ✓ The queue name and command you used to submit the job

Software Installation:

- ✓ Specific name and version of the software
- ✓ Download website
- ✓ Supporting package information if have

Note:

It's USER's responsibility to make sure the correctness of datasets being used by jobs!

20

Work on Sapelo

- User Account
- Connect and Login
- Transfer Files Using Transfer Node
- Software Packages
- Run Interactive Jobs
- Run Batch Jobs
 - Submit Batch Jobs
 - ✓ Serial, Threaded, and MPI Batch Job Submission Scripts
 - Check Job Status and Cancel a Job
 - Check Computing Resources Used by a Job

User Account

User Account: UGAMyID@sapelo1.gacrc.uga.edu
 A valid official UGA MyID is a MUST to create a user account!

- To get a user account:
 - 1. Computing Lab Registration: http://help.gacrc.uga.edu/labAcct.php (for PI of a new group)
 - 2. User Account Request: http://help.gacrc.uga.edu/userAcct.php (for PI of an existing group)
 - 3. New User Training: http://gacrc.uga.edu/help/training/
 - 4. Welcome letter with whole package of information about your Sapelo user account

Connect and Login

On Linux/Mac: use Terminal utility and ssh to your account:

```
ssh zhuofei@sapelo1.gacrc.uga.edu
```

or

```
ssh -X zhuofei@sapelo1.gacrc.uga.edu
```

(1 –X is for X windows application running on the cluster with its UGI to be forwarded to local 2 On Windows, use a SSH client to open the connection (next page))

Logging in: You will be prompted for your UGA MyID password:

```
zhuofei@sapelo1.gacrc.uga.edu's password:
```

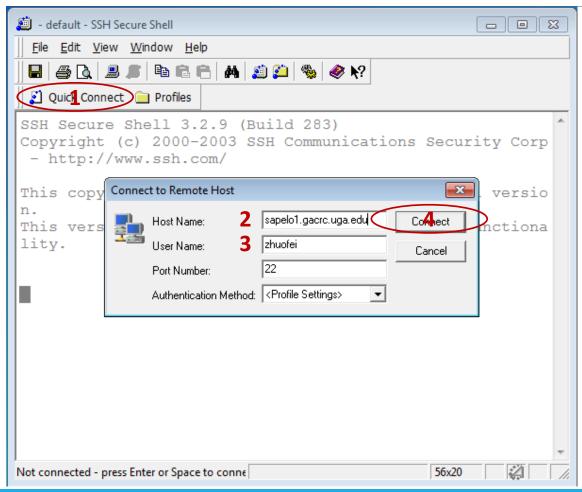

(3 On Linux/Mac, when you type in the password, the prompt blinks and does not move)

Logging out: exit to leave the system:

 $[zhuofei@75-104 \sim]$ \$ exit

Connect and Login

1. To download:

http://eits.uga.edu/hardware_and_software/software/

with your UGA MyID and password

2. After connection is built, working environment is Linux, same as Linux/Mac users'

Transfer Files Using Transfer Node xfer.gacrc.uga.edu

- ✓ ssh username@xfer.gacrc.uga.edu with your UGA MyID password
- ✓ Landing directory: /home/username (Sapelo home)
- ✓ Move data into/out of Sapelo (scp, sftp, rsync, SSH Secure Shell File Transfer, FileZilla)
- Compress or package data on Sapelo (tar, gzip)
- ✓ Transfer data between Sapelo and zcluster (cp, mv)
- ✓ Filesystems you can access:

/home/username/ : Sapelo home (landing spot)

/lustre1/username/ : Sapelo global scratch

/panfs/pstor.storage/home/abclab/username/ : zcluster home

/escratch4/username/ : zcluster scratch

/project/abclab/ : long-term active data storage

✓ Most file systems on Transfer are auto-mounted upon the first time full-path access, e.g., cd /project/abclab/

Transfer Files Using Transfer Node xfer.gacrc.uga.edu

User's local scp/sftp/rsync

Transfer (xfer.gacrc.uga.edu)

On Linux, Mac or cygwin on Windows: scp (-r) [Source] [Target]

E.g. 1: working on local machine, from Local → Sapelo global scratch

```
scp ./file zhuofei@xfer.gacrc.uga.edu:/lustre1/zhuofei/workDir/
```

```
scp -r ./folder/ zhuofei@xfer.gacrc.uga.edu:/lustre1/zhuofei/workDir/
```

E.g. 2: working on local machine, from Sapelo global scratch -> Local

```
zhuofei@xfer.gacrc.uga.edu:/lustre1/zhuofei/workDir/file ./
```

```
scp -r zhuofei@xfer.gacrc.uga.edu:/lustre1/zhuofei/workDir/folder/ ./
```

On Window: SSH Secure Shell File Transfer, FileZilla, WinSCP (next page)

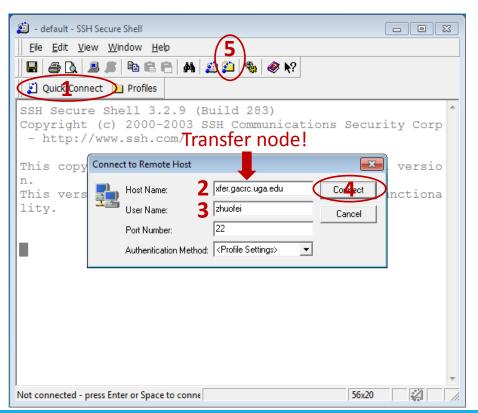

Transfer Files Using Transfer Node xfer.gacrc.uga.edu

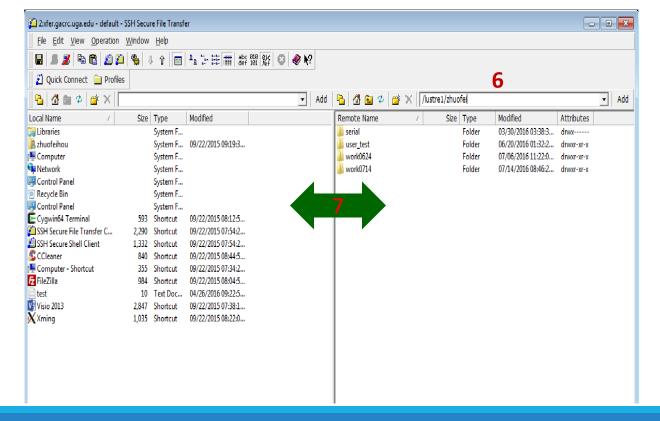

User's local

Transfer (xfer.gacrc.uga.edu)

Software Packages

- The cluster uses environment modules to define the various paths for software packages
- Current number of modules installed is ~300 and expanding daily!
- module avail to list all available modules (centralized installation):

```
zhuofei@75-104 ~]$ module avail
                                                                     ---- /usr/local/modulefiles ---
 Core/StdEnv
                                    exabayes/1.4.1
                                                                    java/jdk1.8.0_20
                                                                                                     openmpi/1.6.5/gcc/4.4.7
                                                                                                                                        rsem/latest
 Data/cache/moduleT.new
                                    examl/3.0.11
                                                                    iava/latest
                                                                                                     openmpi/1.6.5/pgi/14.9
                                                                                                                                        rsem/1.2.20
 Data/cache/moduleT
                                                                                                     openmpi/1.8.3/gcc/4.4.7
                                   expat/latest
                                                                                                                                        samtools/latest
 Data/system.txt
                                                                                                     openmpi/1.8.3/gcc/4.7.4
                                    expat/2.0.1
                                                                    lammps/16Aug13
                                                                                                                                        samtools/0.1.19

```

Software Packages

module list to list which modules currently loaded:

```
[zhuofei@75-104 ~]$ module list

Currently Loaded Modules:
   1) StdEnv 2) moab/7.2.10
```

module load to load the needed modules:

```
[zhuofei@75-104 ~]$ module load ncbiblast+/2.2.29
[zhuofei@75-104 ~]$ module load python/2.7.8
[zhuofei@75-104 ~]$ module load R/3.1.2
[zhuofei@75-104 ~]$ module list

Currently Loaded Modules:
    1) StdEnv    2) moab/7.2.10    3) ncbiblast+/2.2.29    4) python/2.7.8    5) R/3.1.2
```

• module unload to remove the specific module:

```
[zhuofei@75-104 ~]$ module unload R/3.1.2
[zhuofei@75-104 ~]$ module list

Currently Loaded Modules:
   1) StdEnv   2) moab/7.2.10   3) ncbiblast+/2.2.29   4) python/2.7.8
```

Run Interactive Jobs

To run an interactive job, using qlogin command from Login node:

When you are done, remember to exit the session

Run Batch Jobs

- Components you need to run a job:
 - Software already loaded. If not, used module load
 - Job submission script to run the software, and specify computing resources:
 - ✓ Number of nodes and cores
 - ✓ Amount of memory
 - ✓ Type of nodes
 - ✓ Maximum wallclock time, etc.
- Common commands you need:
 - qsub, qdel
 - qstat -f, showjobs, showq

Submit Batch Jobs

[zhuofei@n15 workDir]\$ pwd
/lustre1/zhuofei/workDir
[zhuofei@n15 workDir]\$
[zhuofei@n15 workDir]\$ qsub
1165617.pbs.scm

← n15: interactive node

← /lustre1/zhuofei/: global scratch

sub.sh

qsub is to submit a job

sub.sh is your **job submission script** specifying:

- ✓ Number of nodes and cores
- Amount of memory
- ✓ Type of nodes
- ✓ Maximum wallclock time, etc.

10/3/2016 GACRC SAPELO NEW USER TRAINING 32

Example 1: Serial job script sub.sh running NCBI Blast +

#PBS -S /bin/bash
#PBS -q batch
#PBS -N testBlast
#PBS -I nodes=1:ppn=1:AMD
#PBS -I mem=20gb
#PBS -I walltime=48:00:00

cd \$PBS_O_WORKDIR

module load ncbiblast+/2.2.29

- → Linux shell (bash)
- → Queue name (batch)
- → Name of the job (testBlast)
- → Number of nodes (1), number of cores/node (1), node type (AMD)
- → Maximum amount of physical memory (20 GB) used by the job
- → Maximum wall clock time (48 hours) for the job, default 6 minutes
- → Use the directory from which the job is submitted as the working directory
- → Load the module of ncbiblast+, version 2.2.29
- time blastn [options] >outputfile 2>&1 → Run blastn with 'time' command to measure the amount of time it takes to run the application

Example 1: Serial job script sub.sh running NCBI Blast +

```
#PBS -S /bin/bash
#PBS -q batch
#PBS -N testBlast
#PBS -I nodes=1:ppn=1:AMD
#PBS -I mem=200gb
                                    → Job will be dispatched to run on AMD 256GB
                                                                                  node
#PBS -l walltime=48:00:00
cd $PBS_O_WORKDIR
module load ncbiblast+/2.2.29
time blastn [options] >outputfile 2>&1
```

Example 2: Threaded job script sub.sh running NCBI Blast+

```
#PBS -S /bin/bash
#PBS -q batch
#PBS -N testBlast
#PBS -l nodes=1:ppn=24:AMD
                                     → Number of nodes (1), number of cores/node (24), node type (AMD)
                                         Number of threads (24) = Number of cores requested (24)
#PBS -I mem=200gb
#PBS - I walltime = 480:00:00
#PBS -M jSmith@uga.edu
                                     → Email address to receive a notification for computing resources
                                     → Send email notification when job aborts (a) or terminates (e)
#PBS -m ae
                                     → Standard error file (testBlast.e1234) will be merged into standard
#PBS -i oe
                                         out file (testBlast.o1234)
cd $PBS_O_WORKDIR
module load ncbiblast+/2.2.29
time blastn -num_threads 24 [options] >outputfile 2>&1 -> Run blastn with 24 threads (-num_threads 24)
```

Example 3: MPI job script sub.sh running RAxML

```
#PBS -S /bin/bash
#PBS -q batch
#PBS-N testRAxML
#PBS -l nodes=2:ppn=48:AMD
                                → Number of nodes (2), number of cores/node (48), node type (AMD)
#PBS -l walltime=480:00:00
                                    Total cores requested = 2 \times 48 = 96
#PBS -I mem=20gb
                                    We suggest, Number of MPI Processes (50) ≤ Number of cores requested (96)
cd $PBS O WORKDIR
module load raxml/8.1.20
                                To run raxmlHPC-MPI-AVX, MPI version using OpenMPI 1.8.3/Intel 15.0.2
module load intel/15.0.2
module load openmpi/1.8.3/intel/15.0.2
mpirun –np 50 raxmlHPC-MPI-AVX [options] >outputfile 2>&1 -> Run raxmlHPC-MPI-AVX with 50 MPI processes
                                                               (-np 50)
```

```
#PBS -S /bin/bash
#PBS -q batch
#PBS -N testRAxML
#PBS -I nodes=2:ppn=27:AMD
                                             → ppn number (27) fewer than 48 MUST be a multiplier of 3!
#PBS -l walltime=480:00:00
#PBS -I mem=20g
cd $PBS_O_WORKDIR
# Context Sharing
CONTEXTS=$(/usr/local/bin/set_contexts.sh $PBS_NUM_PPN)
if [[ "$?" -eq "0" ]]; then
                                                            New lines copied from GACRC Wiki
 export PSM_SHAREDCONTEXTS MAX=$CONTEXTS
module load raxml/8.1.20
module load intel/15.0.2
module load openmpi/1.8.3/intel/15.0.2
mpirun –np 50 raxmlHPC-MPI-AVX [options] >outputfile 2>&1 → Run raxmlHPC-MPI-AVX with 50 MPI processes
                                                              (-np 50)
```

Check Job Status (qstat) and Cancel a Job (qdel)

```
[jSmith@75-104 MPIs]$ qstat

Job ID Name User Time Use S Queue

481929.pbs testJob1 jSmith 900:58:0 C batch
481931.pbs testJob2 jSmith 04:00:03 R batch
481934.pbs testJob3 jSmith 0 Q batch

Job status:
R:job is running
C:job completed (or crashed) and is not longer running. Jobs stay in this state for 1h
Q:job is pending, waiting for resources to become available
```

Check Computing Resources Used by a Job

```
Option 1: qstat -f JobID for running jobs or finished jobs in 1 hour
```

Option 2: showjobs JobID for finished jobs over 1 hour, but ≤ 7 days

Option 3: Email notification from finished jobs (completed, canceled, or crashed),

if using:

```
#PBS -M jSmith@uga.edu
#PBS -m ae
```

qstat -f JobID for running jobs or finished jobs in 1 hour

```
resources used.cput = 00:11:55
job state = C
Resource List.mem = 5qb
```

showjobs JobID for finished jobs over 1 hour, but ≤ 7 days

```
: Wed Nov 4 12:02:22 2015
```

Email notification from finished jobs

```
PBS Job Id: 700009.pbs.scm

Job Name: testJob

Exec host: n1/4-27

Execution terminated

Exit_status=0

resources_used.cput=00:05:12

resources_used.energy_used=0

resources_used.wem=410984kb

resources_used.vmem=6548516kb

resources_used.walltime=04:00:59

Error_Path: uga-
2f0f976.scm:/home/zhuofei/MPIs/testJob.o700009

Output_Path: uga-
2f0f976.scm:/home/zhuofei/MPIs/testJob.o700009
```

```
PBS Job Id: 700097.pbs.scm

Job Name: testJob

Exec host: n1/4-27

Execution terminated

Exit_status=271

resources_used.cput=00:11:22
resources_used.energy_used=0
resources_used.mem=412304kb
resources_used.vmem=6548524kb
resources_used.walltime=05:00:41

Error_Path: uga-

Output_Path: uga-
2f0f976.scm:/home/zhuofei/MPIs/testJob.o700097
```

Check Queue Status (showq)

```
active jobs--
```

Guideline Tips

- Do NOT use Login Node to run jobs → Interactive Node or the queue
- Do NOT use Login Node upload or download data to/from cluster
- Do NOT use Login Node to transfer data to the home dir
- NO large memory job running on AMD nodes → HIGHMEM nodes
- NO small memory job running on HIGHMEM nodes → AMD nodes
- As a general rule, threads # = cores # requested

10/3/2016 GACRC SAPELO NEW USER TRAINING

Practical Tips

• Each directory should not have too many files inside! A rule of thumb would be to try to keep no more than a few tens of thousands of files (<10000 would be even better) in any single directory which is accessed frequently.

All files are in ONE single dir!

Files are organized in subdirs!

Practical Tips

Job name should have a specific computational meaning.

```
Good Examples: #PBS -N blastn_dataSet1_trail2; #PBS -N M-10-1121

Bad Examples: #PBS -N job1; #PBS -N bowtie; #PBS -N 20160930
```

• Redirect standard output and error of the application to a file, instead of letting it be written in the stdout .o file and stderr .e file of the job, e.g.:

```
time application >file 2>&1
```

- Monitor job progress from time to time, to catch if a job gets stuck
- Batch job deletion to cancel all your running and waiting jobs from queue

```
qdel (qstat | eqrep '^[0-9]' | awk '$5!~/C/ {print $1}')
```
